Superstore Exploratory Data Analysis Project

A US-based retail store is experiencing profit fluctuations and delivery delays. The goal of this analysis is to explore historical sales data to identify:

Problem Statement:

City

State

Region

Postal Code

Product ID

Sub-Category

Product Name

Category

Sales

Quantity

Discount

object

object

int64

object

object

object

object

object

object

dtype='object')

int64 float64

- Which product categories drive profit?
- · Which regions or customers result in losses?
- How shipping times affect performance?
- which sub-categories are loss-making?
- · Are high discounts killing profits?
- Which segment gives most revenue and profit?
- · Are delivery times affecting orders?

```
· Which regions performs the best and worst?

Out[64]: Row ID int64 object Order ID Order Date datetime64[ns] Ship Date datetime64[ns] Ship Mode object Customer ID object Customer Name object Segment object Country object City object State object Postal Code int64 Region object Product ID object Category object Sub-Category object Product Name object Sales object int64 Quantity Discount float64 float64 Profit dtype: object

1. Top 10 Products by Sales

```
In [12]: top_products = df.groupby('Product Name')['Sales'].sum().sort_values(ascending=False).head(10)
    plt.figure(figsize=(10,5))
    sns.barplot(x=top_products.values, y=top_products.index, palette='viridis', hue = top_products.index, legend = I
    plt.title("Top 10 Products by Sales")
    plt.xlabel("Total Sales")
    plt.ylabel("Product")
    plt.tight_layout()
    plt.show()
```

Insight: The top-selling products are Chairs, Phones, and Binders.

These products have a high volume of transactions, indicating strong customer demand.

Recommendation: Focus marketing efforts on top performers.

2. Sales by Category

```
In [20]: plt.figure(figsize=(11,4))
    sns.barplot(data=df, x='Category', y='Sales', estimator=sum, palette='coolwarm', hue = 'Category' , legend = Fai
    plt.title("Sales by Category")
    plt.ylabel("Total Sales")
    plt.show()
```

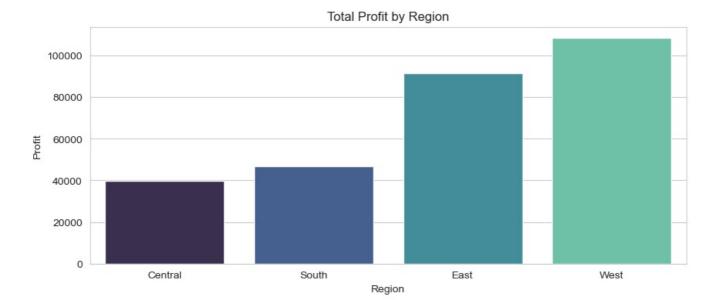

Insight: Technology contributes the most to sales, followed by Furniture and Office Supplies.

Recommendation: Invest more in inventory and promotions for the Technology category.

Explore upsell strategies in Furniture and Office Supplies to boost their sales contribution.

3. Profit by Region

```
region_profit = df.groupby('Region')['Profit'].sum().sort_values()
plt.figure(figsize=(10,4))
sns.barplot(x=region_profit.index, y=region_profit.values, palette='mako', hue = region_profit.index)
plt.title("Total Profit by Region")
plt.xlabel("Region")
plt.ylabel("Profit")
plt.show()
```

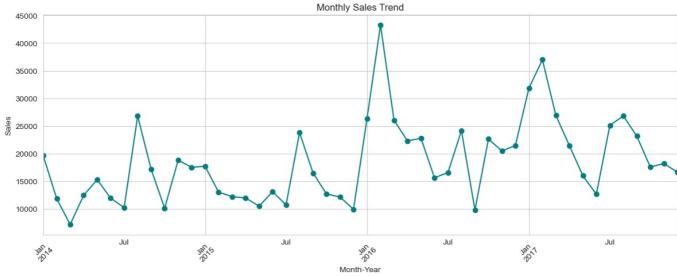

Insight: The West region is the most profitable, while the South lags significantly in profit despite moderate sales.

Recommendation: Conduct a cost analysis in the South region to identify potential inefficiencies.

Focus more marketing and logistics optimization in high-profit regions like the West.

4. Monthly Sales Trend

Insight: Sales show clear seasonal trends, with noticeable peaks during the end of the year (Nov-Dec).

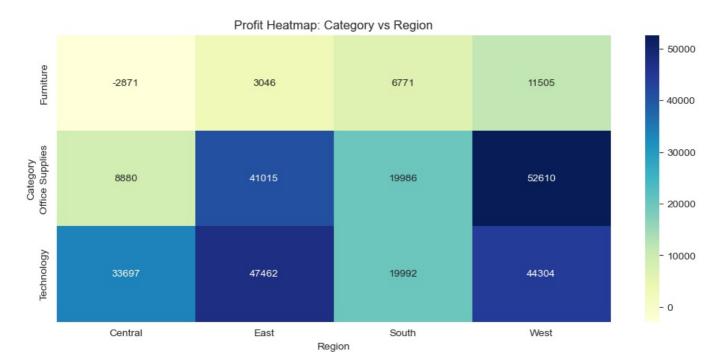

Recommendation: Prepare inventory and staffing in advance for Q4 sales spikes.

Launch major campaigns during peak sales months.

5. Profit Heatmap by Category and Region

```
In [39]: # Pivot table
profit_pivot = df.pivot_table(values='Profit', index='Category', columns='Region', aggfunc='sum')

plt.figure(figsize=(12,5))
sns.heatmap(profit_pivot, annot=True, fmt=".0f", cmap='YlGnBu')
plt.title("Profit Heatmap: Category vs Region")
plt.show()
```

Insight: Technology in the West yields the highest profit.

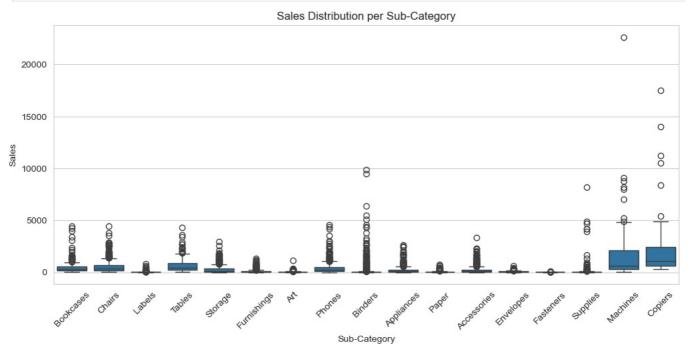

Furniture in the South and East shows lower or negative profit margins.

Recommendation: Reconsider the pricing or supplier costs in regions/categories showing negative profit.

Replicate successful strategies from Technology/West in other categories and regions.

6. Sales per Sub-Category

```
In [37]: #Boxplot of Sales per Sub-Category
plt.figure(figsize=(12,5))
sns.boxplot(data=df, x='Sub-Category', y='Sales')
plt.xticks(rotation=45)
plt.title("Sales Distribution per Sub-Category")
plt.show()
```

Insight: Copiers and Phones show very high outliers in sales, indicating bulk purchases.

Most sub-categories have moderate median sales, but wide variance.

Recommendation: Identify high-value clients purchasing bulk items and tailor offers for them.

Monitor sub-categories with wide spread to understand order behavior.

7. Count of Orders by Ship Mode

Insight: Standard Class is the most commonly used shipping mode.

Same Day is least used, likely due to cost or availability.

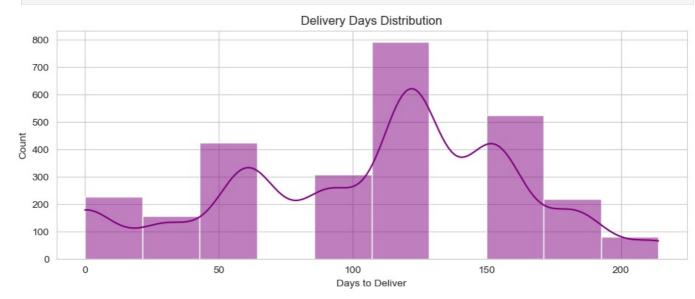

Recommendation: Promote Same Day shipping selectively for premium customers or urgent products.

Monitor customer satisfaction for Standard Class deliveries.

8. Delivery Time Analysis

```
In [33]: df['Delivery_Days'] = (df['Ship Date'] - df['Order Date']).dt.days

plt.figure(figsize=(11,4))
sns.histplot(df['Delivery_Days'], bins=10, kde=True, color='purple')
plt.title("Delivery Days Distribution")
plt.xlabel("Days to Deliver")
plt.show()
```

Insight: Most orders are delivered within 3-5 days.

A few orders take longer than 7 days, possibly affecting satisfaction.

Recommendation: Set realistic delivery expectations based on region/product.

Improve delivery times for late orders through better logistics.

9. Negative Profit Orders

Number of loss-making orders: 1871

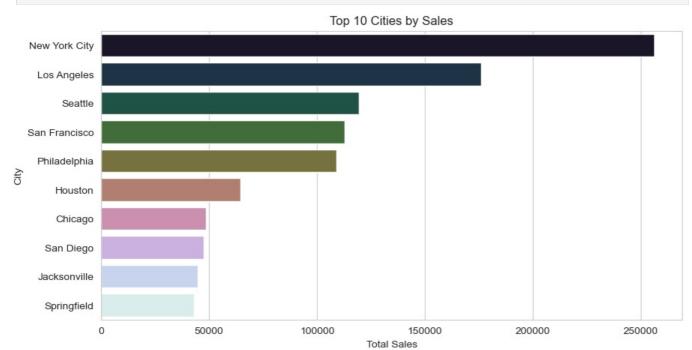

Insight: There are many loss-making orders, most likely due to high discounts or shipping costs.

Recommendation: Set a minimum profit threshold for promotions.

Analyze which products or combinations cause loss and limit their discounting

10. Top 10 Cities by Sales

```
top_cities = df.groupby('City')['Sales'].sum().sort_values(ascending=False).head(10)
plt.figure(figsize=(10,5))
sns.barplot(x=top_cities.values, y=top_cities.index, palette='cubehelix',hue = top_cities.index)
plt.title("Top 10 Cities by Sales")
plt.xlabel("Total Sales")
plt.ylabel("City")
plt.show()
```

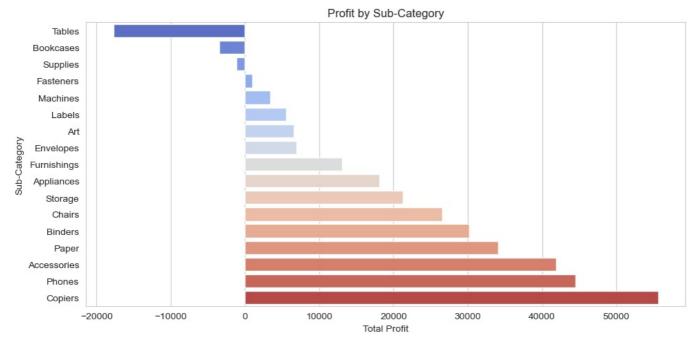

Insight: New York, Los Angeles, and Seattle are the highest revenue-generating cities.

Recommendation: Increase stock and promotions in top cities to capitalize on high demand.

Consider opening regional distribution centers near these cities to reduce delivery time.

11. Profit by Sub-Category

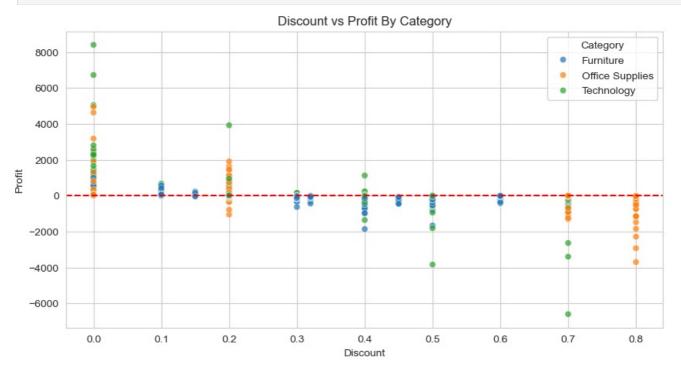

```
In [43]: subcategory_profit = df.groupby('Sub-Category')['Profit'].sum().sort_values()
   plt.figure(figsize=(10,5))
   sns.barplot(x=subcategory_profit.values, y=subcategory_profit.index, palette='coolwarm',hue = subcategory_profit
   plt.title('Profit by Sub-Category')
   plt.xlabel('Total Profit')
   plt.ylabel('Sub-Category')
   plt.tight_layout()
   plt.show()
```

Insight: "Tables", "Bookcases", and "Supplies" are consistently loss-making.

12. Discount Vs Profit By Category

```
In [4]: plt.figure(figsize=(10,5))
    sns.scatterplot(data=df, x='Discount', y='Profit', hue='Category', alpha=0.7)
    plt.title('Discount vs Profit By Category')
    plt.axhline(0, color='red', linestyle='--')
    plt.show()
```

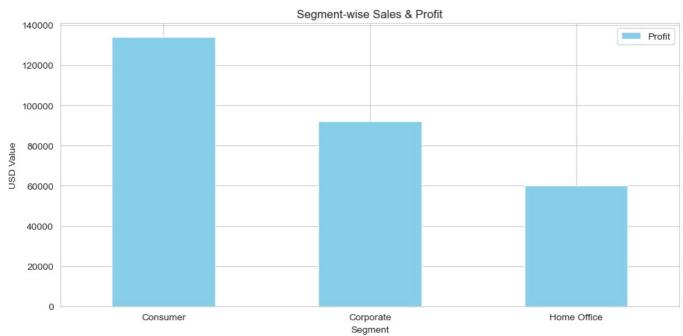

Insight: As discounts increase, profits decline.

Recomendation: Cap discounts at 15% for high-loss categories.

13. Segment-wise Sales & Profit

```
In [7]: segment_sales = df.groupby('Segment')[['Sales', 'Profit']].sum().sort_values('Profit', ascending=False)
    segment_sales.plot(kind='bar', figsize=(10,5), color=['skyblue', 'lightgreen'])
    plt.title('Segment-wise Sales & Profit')
    plt.ylabel('USD Value')
    plt.xticks(rotation=0)
    plt.tight_layout()
    plt.show()
```

Insight: Corporate segment has highest profit per order.

Recommendation: Focus upsell campaigns on Corporate customers.
